Location: GRC Auburn Center with Katherine Shaw
Member Rate: $39 (P120)

The amount of water on the Earth essentially is constant. Less than 3% is freshwater and two-thirds of the freshwater is frozen in glaciers and icecaps. The remaining 1% of freshwater is not evenly distributed or available due to weather patterns. Climate change and population growth make the uneven distribution of water even worse. On Tuesday, get a background on how freshwater is distributed and used, and how we are exploring different options to meet the freshwater demands. Thursday will be a guided tour through the Brightwater Center in Woodinville.
