Who Should Attend?

- ✓ Water Utility Operation and Maintenance Workers
- ✓ Anyone interested in improving their knowledge of the Water Treatment Plant operations.

Course Schedule:

Topics will include:

- Water Sources and Source Protection
- Coagulation and Flocculation Sedimentation
- Granular Filtration
- Membrane Filtration
- Adsorption
- Ion Exchange
- Disinfection

This course will provide a comprehensive overview of the processes found in municipal water treatment plants.

Course Description:

This three-day course will provide the foundation from which to manage, operate, and maintain large and small water treatment plants.

Students will learn important water quality and public health information, practice identifying water treatment components, learn component purposes and functions, and be briefed on applicable drinking water rules and regulations. Students will get the latest information on water treatment processes such as filtration, membranes and advanced disinfection.

This course is a great way to prepare for the Water Treatment Plant Operator certification exam.

Registration fee includes:

- 2.1 CEU
- Handouts
- Morning Refreshments
- Certificate of Completion

Benefits of Attending

This course will provide a water system operator with the fundamental knowledge required of a water treatment plant operator. This knowledge could be used to enhance the operation of a water treatment plant or to help an operator prepare for a certification exam.

- Take the mystery out of the most common water treatment plant processes.
- Discover new ways to enhance the operation of your water treatment plant.
- Understand the rules and regulations that affect water utilities.
